SPECIAL THANKS

In no special order: Murph, Jeb and Æryn

There's been movement at the stations, for the word has passed around, that backdoors and zero-days have gone away.

The corporations only have so much time and effort to patch and protect themselves. Used to be that you could do a run on the servers and expect to smash through it pretty easy.

Turns out they're not messing around any more, though. Ever since people have started hitting them, they've designed them to hit back - and they hit back hard.

Turns out for these harder servers, they need a new calibre of harder hacker.

HOW TO USE

Harder Hax adds 20 Server cards to the Middleware deck, each one designed to seriously ramp up the power of the Servers and make it a more dangerous threat.

To play with these cards, it's very simple; you can add some or all of these Server cards to your deck and deal them out randomly, just like they were original server cards.

When you have these cards, the variance of the server is pretty huge! Some hackers may not want the original servers any more, and some hackers may find the huge numbers on the highest level servers too difficult to handle.

The simplest version of this experience is to use the Harder Hax server card only, and set aside the original server cards for new users only.

It's been months since we found that first security exploit. In those months, we've gotten better at running the math, planning ahead, preparing for risks.

Turns out, the corps have gotten better, too.
